

1901/2006/EC "REACH"

Registration, evaluation, authorization and restriction of chemical substances

REACH regulation provides the following definitions:

- **SUBSTANCE:** a chemical element or its components in the natural state or obtained by means of a manufacturing process
- **MIXTURE:** a mixture or solution composed of two or more substances
- **ARTICLE:** an object which during production is given a special shape, surface or design which determines its function to a greater degree than does its chemical composition.

According to the same regulation, producers and/or importers of "articles" are subject to the registration obligation only if one of the substances contained in them is intended to be released into the environment under normal and reasonably foreseeable conditions of use. Miselli Srl is configured solely as a manufacturer of articles that are not intended to release substances under normal conditions of use.

The survey carried out among our suppliers confirms that they comply with REACH regulation.

Depending on the raw material used, only within some articles produced in Brass, Steel and Aluminum the substance "lead" (Pb) may be present in concentrations even higher than 0.1% by weight per article. This does not imply a change in the conditions of use of the product considering that the products supplied are intended for exclusive industrial use.

Miselli Srl undertakes to periodically monitor the "Candidate List" of SVHC substances updated by ECHA and promptly inform interested parties if new SVHC substances are reported in it which actually appear to be in its products.
